Fiscal Year 2000
Forecast of Contract Opportunities
for
Small Business**

The National Institutes of Health

The National Institutes of Health (NIH) began as a one room laboratory of hygiene in 1887, and since that time has become the world's foremost center for behavioral and biomedical research, and the organization that supports U.S. efforts to fight disease. The mission of the NIH is to uncover knowledge that will lead to better health for all Americans. The NIH accomplishes this mission by supporting and conducting both basic and applied behavioral and biomedical research in its own laboratories, as well as through research support to organizations throughout the country and abroad. Such research attempts to acquire new knowledge to help prevent, detect, diagnose, and treat disease and disability from the rarest genetic disorder to the common cold.

The NIH is comprised of twenty five (25) Institutes and Centers (ICs). The NIH product acquisitions range from basic office, medical and automated data supplies and equipment to sophisticated state-of-the-art biomedical equipment and systems. The NIH service acquisitions range from construction to management consulting to sophisticated and complex biomedical research and development to include efforts such as clinical trials and evaluation. This broad range of acquisition provides the necessary support for the agency to carry out its mission. The responsibility for negotiating, awarding, and administering these acquisitions is carried out by the various contract staff organized under the individual Institutes and in two central organizations, the Office of Contracts Management (OCM) and the Office of Procurement Management (OPM). All acquisitions at the NIH are under the cognizance of the Principal Official Responsible for Acquisition (PORA), the Director of OCM. The NIH-wide Small Business Program is located in this office. The National Institute of Environmental Health Sciences and the National Cancer Institute each employ their own Small Business Specialist, who is responsible for overseeing day-to-day operations. The program, through varied efforts, is intended to maximize small, disadvantaged, woman-owned and HUBZone small business contract opportunities and ensure compliance with applicable statutes and regulations.

The following lists identify the NIH ICs, contracting offices, product/service acquisitions, and the forecast of small business set-aside and 8(a) program contract opportunities for Fiscal Year 2000. For additional information or status on a particular acquisition described in the forecast, you may contact the contracting office noted in the parenthesis following the item description.

The NIH Institutes and Centers

National Eye Institute

Conducts, fosters, and supports basic and applied research, including clinical trials, related to the cause, natural history, prevention, diagnosis, and treatment of disorders of the eye and visual system, and in related fields (including visual impairment and its rehabilitation).

National Heart, Lung, and Blood Institute

Provides leadership for a national program in diseases of the heart, blood vessels, blood, lungs and in the use of blood and the management of blood resources. It plans, conducts, fosters, and supports an integrated and coordinated program of research, investigations, clinical trials, and demonstration and education projects relating the causes, prevention, methods of diagnosis, and treatment (including emergency medical treatment) of cardiovascular diseases through research in its own laboratories and through extramural contracts and research grants.

National Institute of Allergy and Infectious Diseases

Conducts and supports research to study the causes of allergic, immunologic, and infectious diseases, and to develop better means of preventing, diagnosing, and treating these illnesses.

National Institute of Arthritis and Musculoskeletal and Skin Diseases

Conducts and supports basic and clinical research on many of the most debilitating diseases, most chronic in nature, affecting the nation's health. These diseases include the many forms of arthritis and numerous diseases of the musculoskeletal system and of the skin.

National Institute of Child Health and Human Development

Conducts and supports laboratory, clinical, and epidemiological research on the reproductive, neurobiologic, developmental, and behavioral processes that determine and maintain the health of children, adults, families, and populations.

National Institute of Dental and Craniofacial Research

Conducts, fosters, and coordinates research into the causes, prevention, diagnosis and treatment of craniofacial and oral conditions.

National Institute of Diabetes and Digestive and Kidney Diseases

Conducts and supports research on the diseases of internal medicine and related subspecialty fields as well as many basic science disciplines.

National Institute of Mental Health

Plans, conducts, fosters, and supports an integrated and coordinated program of research, investigations, research training, and services research relating to the causes, prevention, diagnosis, and treatment of mental illnesses, and supports basic research in related scientific areas.

National Institute of Neurological Disorders and Stroke

Conducts, fosters, coordinates, and guides research on the causes, prevention, diagnosis, and treatment of the neurological disorders, and stroke, and supports basic research in related scientific areas.

National Institute of Nursing Research

Supports research and research training related to promoting health and preventing disease, understanding and mitigating the effects of acute and chronic illnesses and disabilities, and improving patient care as well as the environment in which it is delivered.

National Institute on Aging

Conducts and supports biomedical, social, and behavioral research, training, health information dissemination, and other programs with respect to the aging process and diseases and other special problems and needs of the aged.

National Institute on Alcohol Abuse and Alcoholism

Lead institute for biomedical and behavioral research focused on improving the treatment and prevention of alcoholism and alcohol-related problems, and reducing the enormous health, social, and economic consequences of alcohol-related problems in the U.S.

Warren Grant Magnuson Clinical Center

Provides hospital services to patients who are the subjects of clinical research conducted at the NIH. The 450-bed hospital has facilities and support services for nearly 1,000 physicians at the NIH working with intramural research programs.

John E. Fogarty International Center for Advanced Study in the Health Sciences

Facilitates the assembly of scientists and others in the health related fields for discussion, study, and research relating to the development of health science internationally.

Center for Information Technology

Incorporates the power of modern computers into biomedical programs and administrative procedures of the NIH by focusing on three primary activities: conducting computational biosciences research; developing computer systems; and providing computer facilities.

National Library of Medicine

One of three national libraries and is the world's largest research library in a single scientific and professional field. Resources are broadly applied to the advancement of medical and health-related sciences. It is a central resource for biomedical information.

National Center for Research Resources

Conceives and develops a broad array of critical research technologies and resources and ensures their availability, thereby strengthening and enhancing biomedical research supported or performed by the NIH.

National Institute on Deafness and Other Communication Disorders

Conducts and supports research and research training with respect to disorders of hearing and other communication processes, including diseases affecting hearing, balance, smell, taste, voice, speech, and language.

National Institute for Human Genome Research

Conducts and supports basic and clinical research programs in order to develop and implement technology for the rapid isolation, analysis, and treatment of genetic diseases.

National Institute on Drug Abuse

Conducts basic, clinical and epidemiological research to improve the understanding, treatment, and prevention of drug abuse and addiction and the health consequences of drug-related behavior.

National Institute of General Medical Sciences

Supports basic biomedical research and training that is not targeted to specific diseases or disorders.

Center for Scientific Review

Provides staff support to the office of extramural research in the formulation of grant and award policies and procedures.

National Institute of Environmental Health Sciences

Located in Research Triangle Park, North Carolina, the Institute mission is directed at reducing the burden of human illness and dysfunction from the environmental exposures by understanding each element and how they interrelate.

National Cancer Institute

Conducts and supports research, training, health information dissemination, and other programs with respect to the cause, diagnosis, prevention, and treatment of cancer and the continuing care of cancer patients and the families of cancer patients.

National Center for Complementary and Alternative Medicine

Conducts and supports basic and applied research and training and disseminates information on complementary and alternative medicine to practitioners and the public.
